

For the simultaneous, fully automatic tightening and loosening of up to 8 rail fastenings in one work step, and for the synchronous tightening of clamping devices.

THE ADVANTAGES. YOUR BENEFITS.

- Highly synchronize operation with accurate torque
- Efficient and precise tightening mechanism
- High working speed
- Compact aluminium frame with 4 wrenching shuttles and 8 electrical wrenching drives
- Display for setting, indicating and checking the torques
- Electronic track recording
- Optional data storage and evaluation by PC
- Fast and easy operation within gauge
- Can be combined with various power supplies
- Wrenching unit with fully integrated lighting
- Remote control

Drive combinations

- Road/rail excavator equipment
- Road/rail vehicle, e.g. Unimog
- Integrated into rail vehicles

Accessories on request.

**Other drive concepts are available on request.
